

GREEN BUBBLE

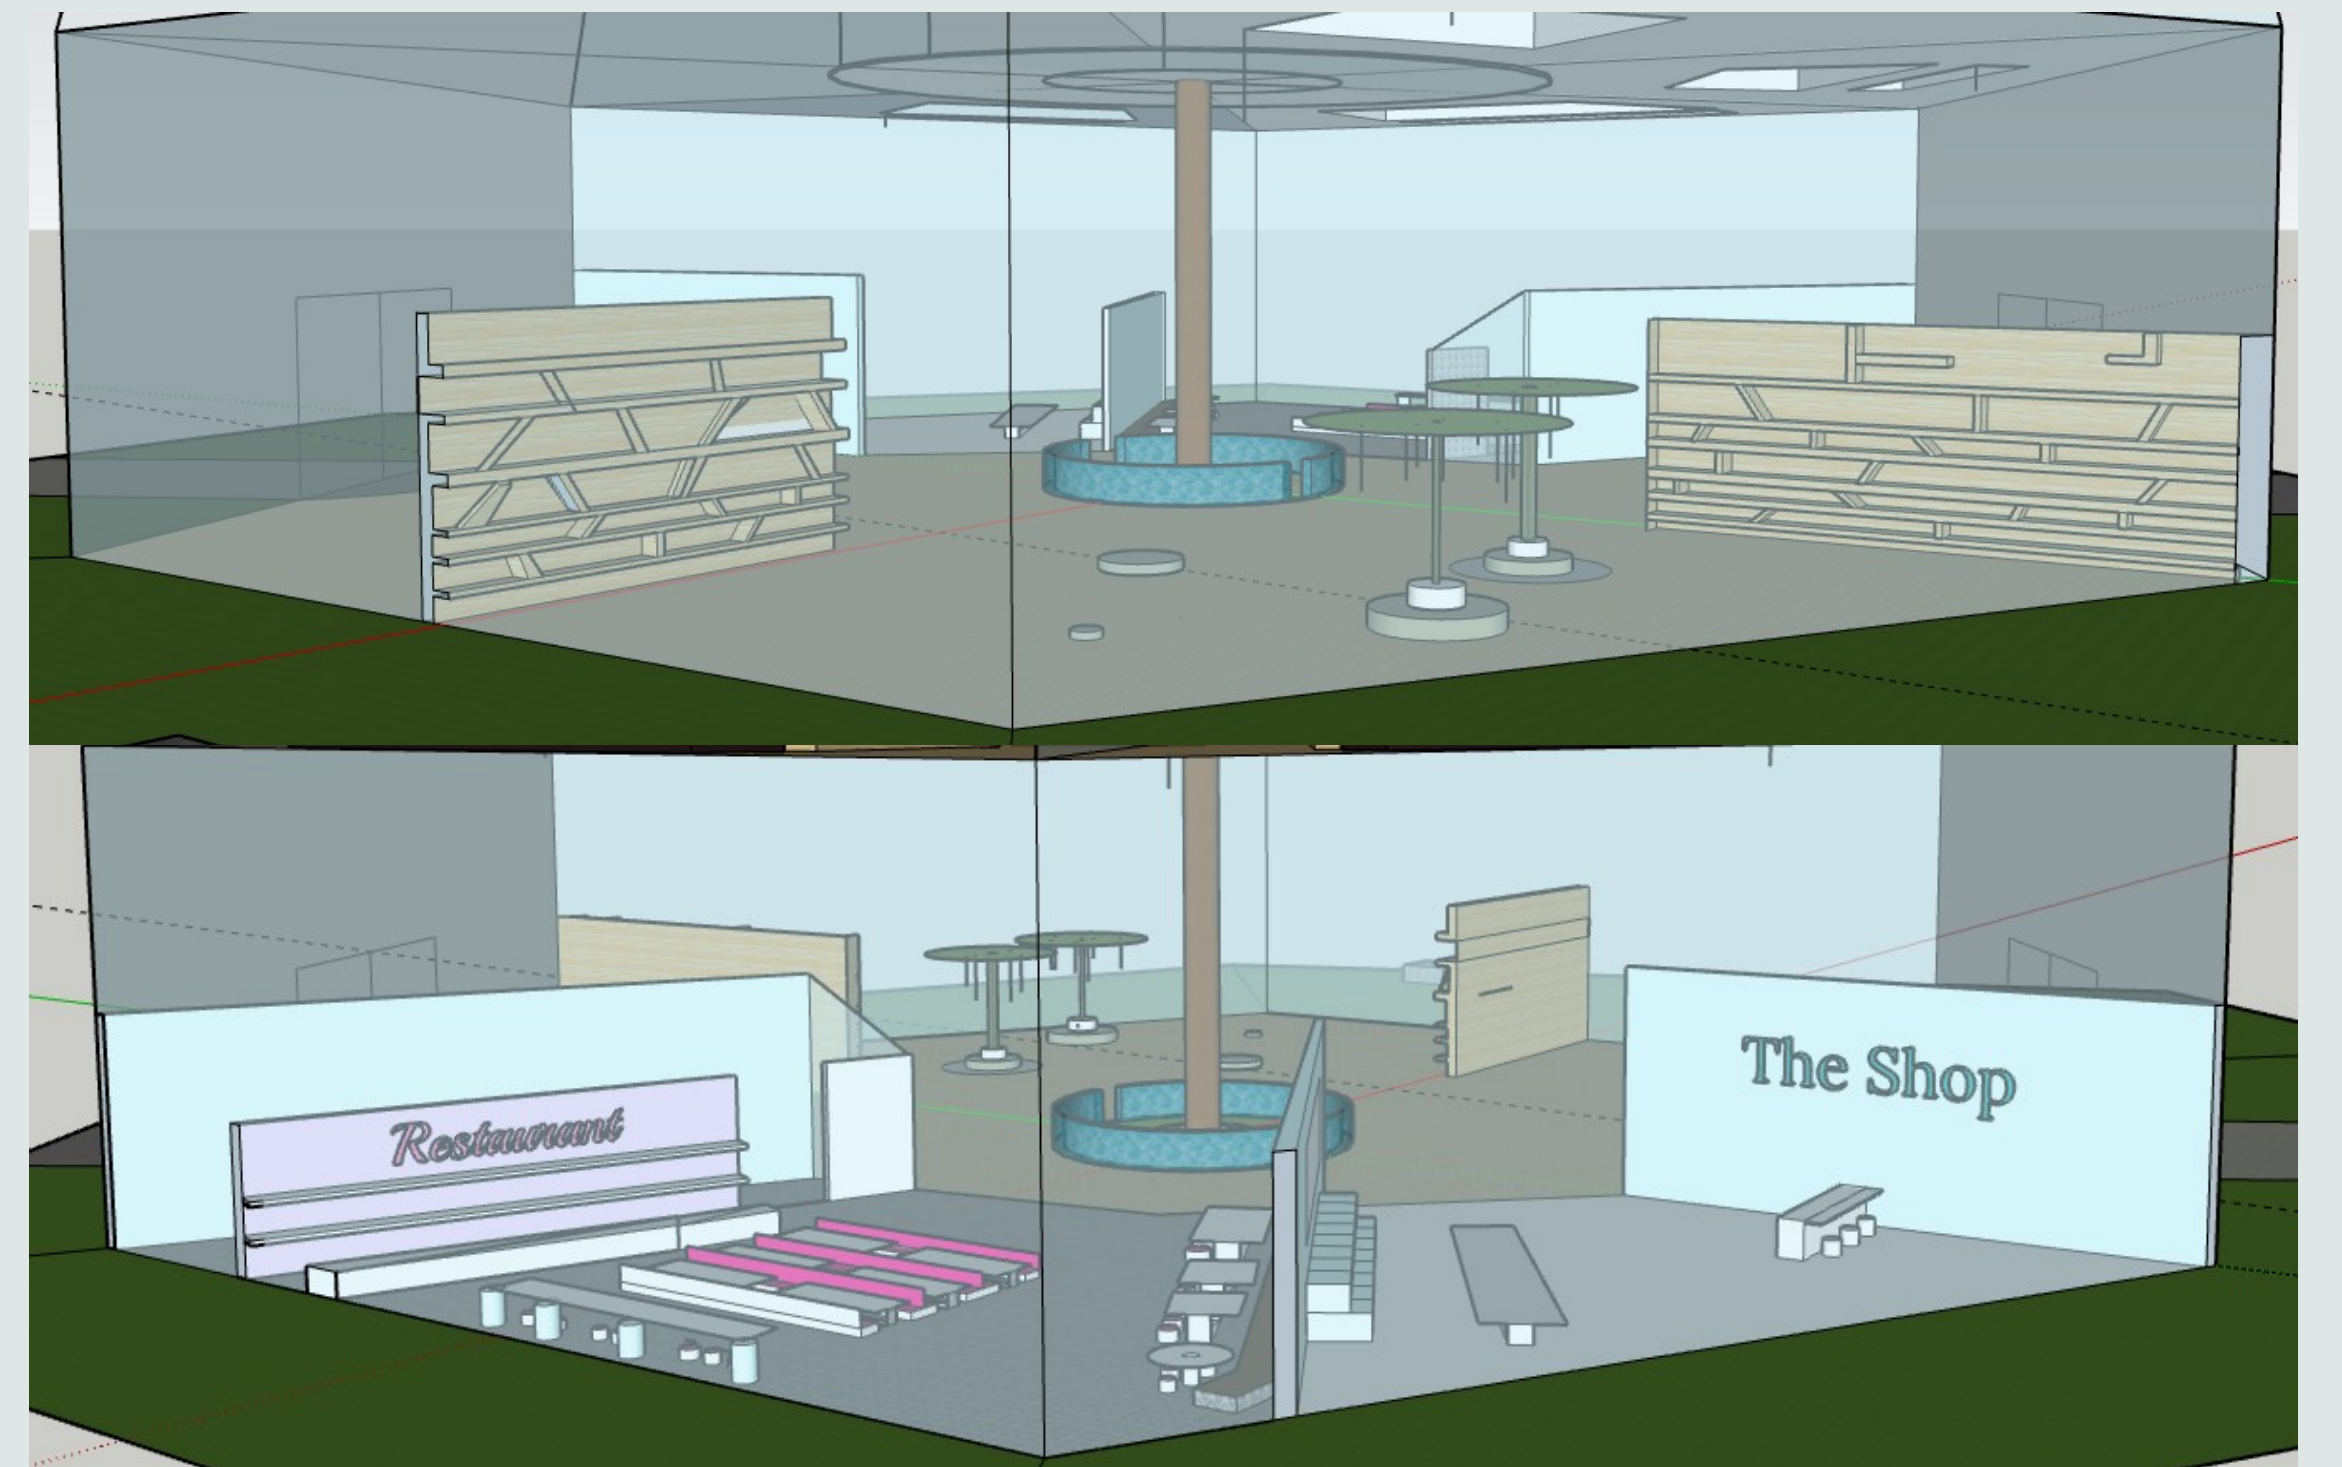

This is our project ! The bubble will be completely covered with transparent solar panels and is an aménagement revolutionary who brought work and fun !

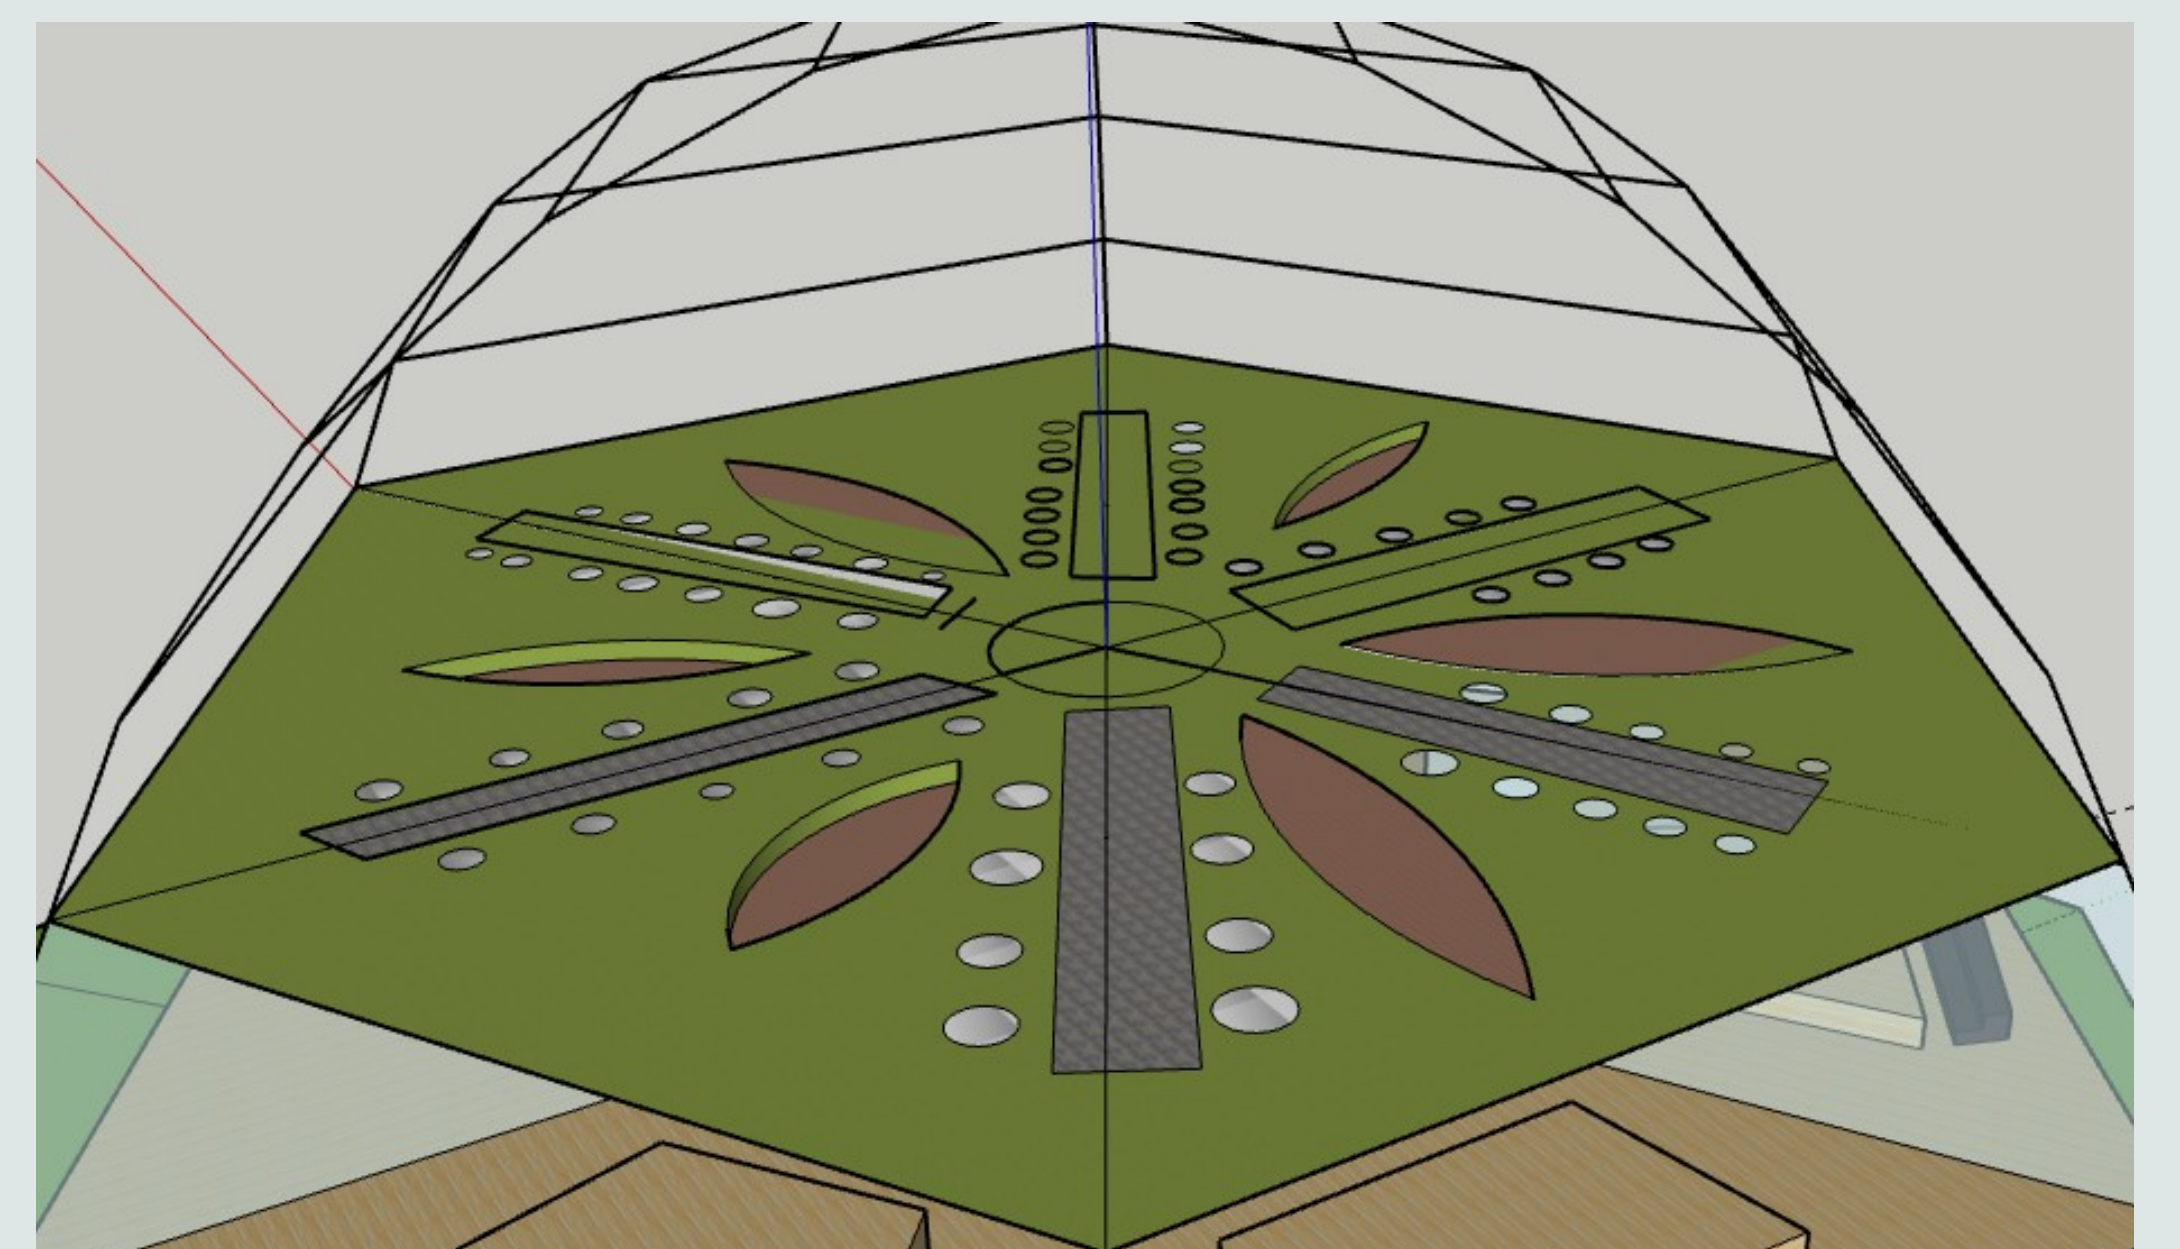

In the first level, there will be rental offices for art exhibition and for meeting. Between each office, there will be separations in colored glasses adjustable by a switch and it's the same for the temperature. Moreover, in the center of this level, there will be a light well for illuminate the offices in the day.

In the garden, there will be a steam will be related at the port thanks to the turbine in the opening of the canal. Everywhere in the garden there will be a lots of vegetations which will be watered by automatic watering, winds turbines in flowers shape with a mill which will turn thanks to the water of the port and created electricity which will be stored in the battery for the bubble and for the elevator which will be outside and available to take the people in each level. The elevator will move close to the windows of the bubble. In the garden next to bubble, there will be a barbecue area with an ecological oven and much tables to eat.

The first floor will be a room for all the people it will be used to have a good time. There will be a big tree bioluminescent and a big aquarium with the harbour water in the center of the room, a large library, a lot of space to rest, to relax... And there will be a restaurant, and a store fed by the vegetable garden of the level 2. This level is a pleasant place and allows people to have a good time, eat good things, work if they feel like it in the good conditions !

The level 2 will be a level for growing plants. There will be differents gardens with lots of differents vegetables. The plants will be watered with an automatic watering who will water the plants when they need it. This level will be equiped with an open roof. It may be accessible for the people who want to be with the plants.

WHY IT'S GREEN ?

It's green because, our project has in the level 2 a vegetable garden in the greenhouse, the vegetable garden is collaborative because the people can relax, buy and eat the vegetables in the store and the restaurant.

The bubble has a lot of vegetations.

Moreover, in the garden there will be wind turbines in flowers shape, a mill and a turbine in the opening of the canal all installations will produce electricity for the bubble, and there will be a solar cooker to eat with the sun.

Finally, the bubble will be covered with transparent solar panels which will also produce electricity.

WHY IT'S SMART ?

It's smart because, our project has a ajustable temperature which will adjust according the ideal temperature for the bubble, there will be an automatic watering for the outside and inside plants, trees and bioluminescent plants which will allow to make the bubble shine at night and the light well which shine during the day.

To move in the bubble there is an elevator available for people.

Then, in the work level there will be in the offices separation in colored glasses adjustable by a switch Finally, in the garden there is a battery which stores the electricity made by the port.

All things are powered with the electricity to produced by the harbour and the solar panels!
